**Intelligent Micro Patterning Provides SF-100 for Fortune 500 Technology Company,  
Hewlett Packard Corporation**

Intelligent Micro Patterning, LLC, St. Petersburg, Florida, announced the sale of an SF-100 maskless photolithography system to Hewlett Packard Caribe, Ltd. The SF-100 is a unique, maskless photolithography system that utilizes patented Smart Filter technology, licensed by Intelligent Micro Patterning, LLC from the University of South Florida. Smart Filter technology incorporates proprietary, cutting-edge, micro-optical techniques to rapidly project master images directly onto diverse substrate materials, such as quartz, ceramics, and plastics, without the use of photomasks. The main application for this system is the rapid prototyping of new, unique products for ink jet cartridge fabrication.

Dr. Jay Sasserath, the Company's Chief Executive Officer, stated, "We are very excited to be working with HP Caribe in this exciting market segment. Due to the inherent flexibility and capabilities of our technology, the SF-100 will be a significant addition to the customer's micropatterning capabilities. Additionally, this new market area will allow our company to further expand our current customer base into ink jet fabrication."

Mr. Lester Ortiz, Laboratory Manager, HP Caribe, added, "We feel that having Intelligent Micro Patterning's maskless exposure technology that is provided with the SF-100 will allow us to develop new and unique concepts for our customers in a quicker and more cost effective manner. Having this rapid prototyping capability in our group will greatly aid our development programs and ensure that we continue to exceed our customer's expectations."
