**Intelligent Micro Patterning Provides SF-100 for the Nanotechnology Research Institute
at University of Ulster, Northern Ireland**

Intelligent Micro Patterning, LLC, St. Petersburg, Florida, announced the sale of an SF-100 maskless photolithography system to the Nanotechnology Research Institute, located at the University of Ulster, Northern Ireland. The SF-100 is a unique, maskless photolithography system that utilizes patented Smart Filter technology, licensed by Intelligent Micro Patterning, LLC from the University of South Florida. Smart Filter technology incorporates proprietary, cutting-edge, micro-optical techniques to rapidly project master images directly onto diverse substrate materials, such as quartz, ceramics, and plastics, without the use of photomasks. The main application for this system is the fabrication of nano-sensors on 3 dimensional media.

Dr. Jay Sasserath, the Company's Chief Executive Officer, stated, "We are very excited about working with the University of Ulster and it's exceptional staff to aid them in the development of their unique biotechnology sensors. These creative technologists will surely develop many different and unique devices using non-traditional substrates in combination with the SF-100. Additionally, this is the first SF-100 that we have provided to Ireland, which offers many other opportunities for our products."

Professor Jim McLaughlin, Nanotechnology Research Institute, added, "We are delighted to collaborate with Intelligent Micro Patterning for our research. Having rapid micro-patterned substrates available for our research in the areas of micro and nano-sensors will greatly enhance our R&D programs. Also, Intelligent Micro Patterning was very willing and quick to work with us on developing new patterning solutions on 3-D media. Lastly, their technical breadth and experience will be an excellent resource for us now and in the future. Overall, we expect that this partnership will be very beneficial to both parties for many years."
